**High Performance
Multi-Layer Radiant
Barrier Insulation .**

- **Under Screed. Can be used With or Without water heating pipes**
- **Floating Floors**
- **Suspended Timber Floors.**
- **Under Crawl space Timber Floors.**

At only 6mm Thick when installed and only 15mm in its open state, you will save on Floor Height compared to traditional methods such as Kingspan or Celotex.

With a Built in Vapour Control Layer RadiFloor eliminates cold bridging and stops any form of damp from rising through the concrete into your home

Save on Labour time. As there is no sawing or any Protective Clothing needed. RadiFloor Is the easiest and Quickest Way to Fully Insulate Under

The Real Insulation Experts!

RadiFloor can be used to enhance u-values in both new build and renovation projects.

RadiFloor is fully flexible and easily cut to fit, requires no specific PPE and is easy to transport.

Eliminates the risk of thermal bridging improving overall energy performance.

Under Screed Application

General Fixing And Instructions:

- I. **Ensure Floor is clean from debris and dust.**
- II. **Lay RadiFloor directly on top of the floor surface ensuring 100mm overlap at the wall**
- III. **RadiFloor can be easily cut with a Sharp Knife or Scissors**
- IV. **RadiFloor Must be Sealed with ThermaSeal Foil Joining Tape along the edges, any overlaps and cuttings to ensure a complete seal.**
- V. **Then you can install your Underfloor Heating System using the integrated grid system to align your pipes. (if your not using a heating pipe system go to the next step)**
- VI. **Finish off with installing the Screed in accordance to the manufacturers instructions and good building practice.**

Suspended Timber Floor Application

Low Profile And High Performance makes it the ideal solution where Floor height is an issue

Stop Cold Drafts and Moisture rising through your Floorboards.

Lightweight Thin and Flexible makes it the Ideal Solution for fitting under Floors.

Order Online For Free Next Day Delivery on all order over £100+VAT!

General Fixing And Instructions:

From above the floor. (If you have access to the crawl space below RadiFloor can also be stapled direct to the underside of the joists to avoid the need for removing floor boards)

- I. RadiFloor is rolled out over the joists, then stapled in place to create the required airspace or nailed in place through the Saddle Clips.
- II. The horizontal joints are tightly overlapped and left open to allow the Timbers to breathe the moisture to disappear.
- III. RadiFloor should be sealed around the perimeter or brought up above the floor deck.
