Insulation for Optimal Protection

EcoQuilt Expert

The EcoQuilt Expert is ideal for applications where your IBC contents are more sensitive to temperature changes, especially during international shipping or in environments with extreme fluctuations.

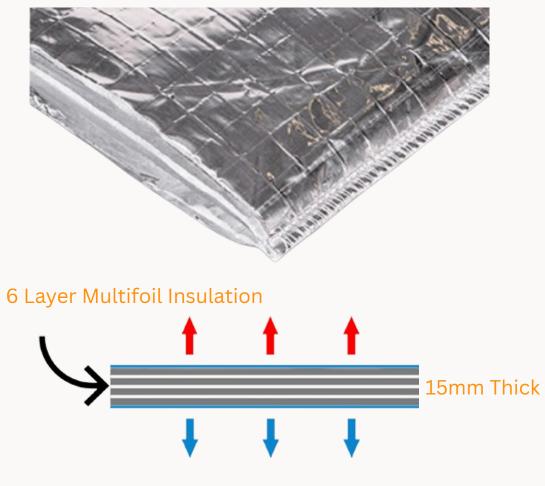

ThermaPack Ultra Double

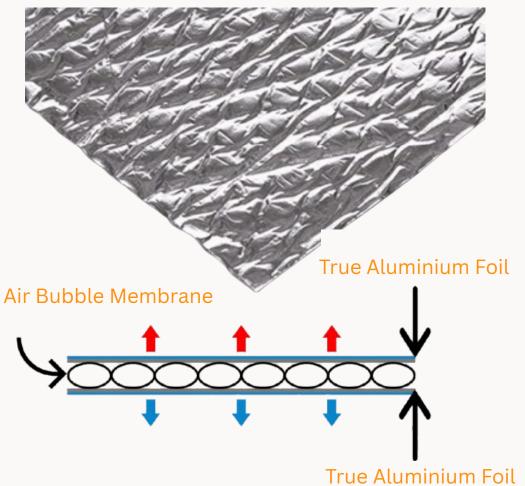

The ThermaPack Double is made with a bubble insulation membrane enclosed between two layers of highly reflective True Aluminium Foil. The reflective aluminium layers help deflect excess heat in summer and block out cold in winter, offering lightweight yet highly effective thermal protection.

Insulation for Optimal Protection

Easy Access & Reusable Design

Our IBC Covers come with Velcro seal closures, allowing:

- Quick and easy access to your IBC contents
- Simple resealing for repeated use
- Convenience without compromising thermal protection

IBC Insulation Covers create a protective thermal barrier around your IBC, reducing the impact of external temperature extremes—whether it's intense heat or freezing cold.

By slowing down heat transfer and minimising cold bridging, these covers help maintain a more stable, ambient internal temperature, protecting the integrity of your contents.
